Performance 5 years in %	+24.16%
Performance since inception in %	+27.40%

Index/Participation Certificates | Description

With an index certificate, you can directly benefit from the development of the underlying instrument. It allows you to diversify the risk, because you do not invest in one specific security, but in an index – such as for example the DAX. This way your investment is not influenced by the fluctuations in one security, but by the combined development of all the securities contained in the index.

The losses of one group of shares may be offset by the gains in another group in the index. Your overall risk is therefore lower if you hold an index certificate than if you hold specific shares. Index certificates may be issued on performance indices as well as on price indices.

Secondary market

During the term it is possible to sell the product during the trading hours at the exchanges, where the product is listed.

The settlement at maturity of the certificate will realize within 7 working days.
