Currency	CZK
EU withholding tax	no

since inception

Information about previous performance does not guarantee future performance. Performances under 12 month have only little informative value because of the short maturity.

Source: Česká spořitelna, a. s.

+ Advantages

- Your return potential is disproportionately high due to low capital investment and the leverage effect.
- You can participate in rising prices.
- The influence of time value and volatility is very low.

! Disadvantages

- You may lose your entire investment.
- The leverage effect may cause disproportionately high losses.
- If this product is not secured against a currency risk, the performance of the product is affected by the positive or negative trend of the exchange rate between the product's currency (CZK) and the currency in which the underlying asset is traded. If CZK strengthens, the price falls and if CZK weakens the price rises.

Turbo long/short | Description

Turbo long/short allow you to benefit from market fluctuations in both ways. Turbo Long benefit from rising prices, Turbo Short from falling ones. Every incremental movement in the price of the underlying may lead to disproportionately high returns due to the leverage effect. However, while the unlimited upward potential is the upside of this particular Turbo , the risk of losing the entire capital invested if the set barrier has been broken is its downside.

In the case of Turbo Long the barrier is set below the current price of the underlying. Turbo Short will have the barrier set above the current price of the underlying. There are Turbo long/short with and without expiry date.

Secondary market

During the term it is possible to sell the product during the trading hours at the exchanges, where the product is listed.

**The settlement at maturity of the certificate will realize within 7 working days.
The settlement at knock-out of the certificate will realize within 7 working days.**
