## Description

Every rationally thinking person looks for ways to get the most effective return on their money. For many it is then important to know in advance how the investment may grow and, most of all, its yield potential and the market risk they take. If these parameters are also important to you then PDCP MULTI 2 is here for you. It is designed for clients who do not require regular disbursements of the yield, but prefer growth of their investment depending on the trends in capital markets. They are also willing to accept any fluctuations of these markets which may result in the fact that they will receive a lower amount at maturity than

they originally invested.

**An interesting yield potential of up to 28% in four years with a min. 96% return on the nominal value of the PDCP MULTI 2 at its maturity date.**

The global “multi asset” investment strategy uses a broad spectrum of underlying assets ranging from bonds, shares to commodities and applies a flexible approach to the management of the market risks taken and the yield potential. This complex investment style is used for the new PDCP MULTI 2 whose yield depends on the trend of the Multi Asset Global Futures EUR index. The globally focused index uses a flexible, diversified investment approach, it actively responds in its composition to the changing market conditions. It is focused on developed markets and in order to achieve its targets it flexibly alters the composition of its portfolio by making allocations in eleven underlying assets out of three basic asset classes – shares, government bonds and commodities. Using futures contracts it can track 4 stock market indexes (S&P 500, EURO STOXX 50, FTSE 100, Nikkei 225), 4 types of government bonds (US Treasury Notes, UK Gilts, the German government bonds so-called bunds and Japanese government bonds), and three commodities (gold, Brent oil and WTI oil). The change of index allocation between individual underlying assets is carried out once a month, and each month a new portfolio is fixed from the available assets. The index’s target volatility of about 6% is crucial for the index’s composition

### Payment notes

#### How does the Prémiový dluhový cenný papír MULTI 2 work?

- The yield of the four-year PDCP MULTI 2 depends on the trend of global Multi Asset Global Futures EUR index.
- The initial value of the underlying asset shall be determined on 4 September 2018.
- The underlying asset is observed annually. Each year its value is recorded on the observation day.
- The average value of the underlying asset is calculated from the total of these 4 values acquired during observation.
- This is compared to its initial value.
- The total amount of the payout at maturity is calculated: 100% of the nominal value of the Premium Bond + 100% participation × (average value of 4 observations of the underlying asset/initial value – 1).
- Even with a greater fall in the underlying asset at least 96% of the nominal value (see Note) of the Premium Bond is always paid out at maturity thanks to the guarantee.
- For the duration of the Premium Bond its price may fall even below 96% of its nominal value with regard to the trend in the underlying asset and market conditions.
- The maximum amount of the premium is fixed at 28% of the nominal value of the Premium Bond for the duration of PDCP MULTI 2, i.e. for 4 years.
- Regular annual observation and averaging of the acquired index values partly protect the investor from any sharp fall of the prices of the observed underlying asset just before maturity. The total yield does not depend only on the closing value of the observed underlying asset, but on the continuous value of the underlying asset throughout the duration of the PDCP MULTI 2. However regular observation can also reduce the resulting yield (if for example there is a rise in the underlying asset just before maturity).
- You will find examples of scenarios at maturity in the leaflet

-----  
*Note: The disbursement of the guaranteed amount depends on the ability of the issuer to meet its commitments arising from the guarantee.*
