Description

Every rationally thinking person looks for ways to get the most effective return on his money. For many it is then important to know in advance how the investment may grow and, most of all, its yield potential and the market risk he takes. If these parameters are also important to you then you might be interested in investing to Prémiový dluhopis MULTI 7 (PD MULTI 7). The four-year PD MULTI 7 is designed for clients who do not require regular disbursements of the yield, but prefer growth of their investment depending on the trend in capital markets.

An interesting yield potential of up to 20% in four years with a minimum 100% return on the nominal value (see Note) of PD MULTI 7 at its maturity date.

The global “multi asset” investment strategy uses a broad spectrum of underlying assets ranging from bonds, shares to commodities and applies a flexible approach to the management of the market risks taken and the yield potential. This complex investment method is used for the Prémiový dluhopis MULTI 7 whose yield depends on the trend of the Multi Asset Global Futures EUR index. The globally focused index using a flexible and diversified investment approach actively responds in its composition to the changing market conditions. It concentrates on developed markets and in order to achieve its targets it flexibly alters the composition of its portfolio by making allocations in eleven underlying assets out of three basic asset classes – shares, government bonds and commodities. Using futures contracts it can track 4 stock market indexes (S&P 500, EURO STOXX 50, FTSE 100, Nikkei 225), 4 types of government bonds (US Treasury Notes, UK Gilts, the German government bonds so-called bunds and Japanese government bonds), and three commodities (gold, Brent oil and WTI oil). The change of index allocation between individual underlying assets is carried out once a month, and each month a new portfolio is fixed from the available assets. The index target volatility of about 6% is crucial for the index composition.

Payment notes

How does the Prémiový dluhopis MULTI 7 work?

- The yield of the four-year PD MULTI 7 depends on the trend of global Multi Asset Global Futures EUR index.
- The initial value of the underlying asset shall be determined on 18 March 2019.
- The underlying asset is observed annually. Each year its value is recorded on the observation day.
- The average value of the underlying asset is calculated from these 4 values acquired during observation. This is then compared to its initial value.
- The total amount of the payout at maturity is calculated: 100% of the nominal value of the Premium Bond + 100% participation × (average value of 4 observations of the underlying asset/initial value – 1).
- Even with a greater fall in the underlying asset at least 100% of the Premium Bond nominal value (see Note) is always paid out at maturity thanks to the guarantee.
- For the duration of the Premium Bond its price may fall even below 100% of its nominal value with regard to the trend in the underlying asset and market conditions.
- The maximum amount of the premium is fixed at 20% of the Premium Bond nominal value for the duration of PD MULTI 7, i.e. for 4 years.
- Regular annual observation and averaging of the acquired index values partly protect the investor from any sharp fall of the prices of the observed underlying asset just before maturity. The total yield does not depend only on the closing value of the observed underlying asset, but on the continuous value of the underlying asset throughout the duration of the PD MULTI 7. However regular observation can also reduce the resulting yield (if for example there is a rise in the underlying asset just before maturity).

You will find examples of scenarios at maturity in the leaflet

Settlement

- Maturity of the Premium Bond is 4 April 2023
- Česká spořitelna pays out the yield and the nominal value

- Liquidity: daily according to current market prices in the Exchange Rate List of Česká spořitelna, a.s.
- It takes three working days to settle the buying and selling of the Premium Bond

Secondary market

- Minimum purchased amount: 1 piece
- Price for the provision of early redemption: 2% of the transaction volume
- The Premium Bond can be sold even before the maturity date for the price in the Česká spořitelna Exchange Rate List which you will find here at the Investment Centre/Exchange Rate Lists

Note: The disbursement of the guaranteed amount depends on the ability of the issuer to meet its commitments arising from the guarantee.

Note 2: Product risk rate weight is on a scale from 1 to 7 from a potentially lower risk and yield of 1 to a potentially higher risk and yield of 7 assuming that you will keep the product until the maturity date. The real risk may substantially differ, if you sell the product prematurely. The product risk-weight is a guide for comparing the rate of risk in comparison with others. It shows how likely it is that you can lose money as a consequence of movements on the markets, or because the issuer will be unable to pay out the money.

Disclaimer

In the period before maturity, the bond price can fluctuate above and below the bond face value depending on the development of the interest rate and underlying asset. A bond can be sold even before the maturity date, for the price pursuant to the pricelist of the issuer.
