+ Advantages

Why buy Prémiový dluhopis MULTI 10?

- Interesting yield potential of up to 40% for its duration.
- 135% participation in a regularly observed trend of a broadly diversified underlying asset – the Solactive ERSTE Multi Asset Index 35 VC index.
- Regular observation of the underlying asset. The resulting yield is calculated as 135% participation of the average annually fixed values of the observed underlying asset.

! Details you should be aware of

- The Premium Bond guarantees a return on the entire invested amount. PD MULTI 10 guarantees a return of a minimum 100% of its nominal value (see Note) at the maturity date.
- The guarantee does not apply in situations when the issuer fails or if you sell the Premium Bond before its maturity.
- The Premium Bond holder bears the issuer's credit risk.
- If you use the portfolio method of investment advice, ask your banker or investment specialist to assess

Please read the disclaimer at the end of the document.

1/6

➤ CZ Key Information Documents

- Even with a greater fall in the underlying asset at least 100% of the Premium Bond nominal value (see Note) is always paid out at maturity thanks to the guarantee.
 - Immediate availability of funds. You can sell the Premium Bond, subject to standard market conditions, through Česká spořitelna at any time before maturity, for the market price shown in the Exchange Rate List of Česká spořitelna. However in such a case the price may fluctuate even below 100% of its nominal value. The payout guarantee of a minimum of 100% of its nominal value (see Note) applies to payout at maturity.
 - The Premium Bond is issued in Czech crowns, the investor does not bear the currency risk.
 - Electronic version of the prospectus is published on the Issuer's website www.erstegroup.com. ERSTE GROUP BANK AG as the issuer and creator of this product with an investment component, has drawn up the document Notification of Key Information in which you will find basic information about this investment product.
 - You can find the Notification on the creator's website www.erstegroup.com and on Česká spořitelna investment portal www.investicnicentrum.cz
-
- Note: The disbursement of the guaranteed amount depends on the ability of the issuer to meet its commitments arising from the guarantee.*
- whether this product should become part of your investment portfolio.
 - The prices are given as the percentages of the nominal value. The buying price means the client is selling, the selling price means the client is buying.
 - Issuer: Erste Group Bank AG
 - Underlying asset: Solactive ERSTE Multi Asset Index 35 VC
 - Participation: 135% in a regularly observed trend of the underlying asset
 - Guarantee: 100% of the PD nominal value at the maturity date (see Note)
 - Maximum payout: 140% of the PD nominal value
 - Selling price: 100%, free of charge
 - Formula for calculating the value at maturity: 100% of the PD nominal value + 135% participation × (average value from 4 observations of the underlying asset/initial value – 1), minimum 100%, maximum 140%
 - Underlying asset initial value fixing date: 8 July 2019
 - Observation: annual, always at 8 July, with the convention of the following working day
 - Last observation: 10 July 2023
 - Distributor's costs valid at the issue date: approximately 0.5% p.a., you will find the precise expression in the Agreement for Purchase of PD MULTI 10
 - Issuer's costs valid at the issue date: you will find the precise expression in the Notification of Key Information
 - Price for the provision of early redemption: 2% of the transaction volume
 - Minimum investment: 1 piece
 - Product risk rate weight is on a scale from 1 to 7 from a potentially lower risk and yield of 1 to a potentially higher risk and yield of 7 assuming that you will keep the product until the maturity date. The real risk may substantially differ, if you sell the product prematurely. The product risk-weight is a guide for comparing the rate of risk in comparison with others. It shows how likely it is that you can lose money as a consequence of movements on the markets, or because the issuer will be unable to pay out the money.

Description

Every rationally thinking person looks for ways to get the most effective return on his money. For many it is then important to know in advance how the investment may grow and, most of all, what is its yield potential and the market risk he takes. If these parameters are also important to you then you might be interested in investing in Prémiový dluhopis MULTI 10 (PD MULTI 10). The four-year PD MULTI 10 is designed for clients who do not require regular disbursements of the yield, but prefer growth of their investment depending on the trend in capital markets.

An interesting yield potential of up to 40% in four years with a minimum 100% return on the nominal value (see Note) of PD MULTI 10 at its maturity date.

The global "multi asset" investment strategy uses a broad spectrum of underlying assets ranging from bonds, shares to commodities and applies a flexible approach to the management of the market risks taken and the yield potential. This complex investment method is used for the Prémiový dluhopis MULTI 10, whose yield depends on the trend of the Solactive ERSTE Multi Asset Index 35 VC index. The global index uses "Volatility Control" as a mechanism to monitor volatility which once it exceeds the limit it automatically reduces its exposure to the basic portfolio and begins to target the money market more. The basic portfolio of Solactive ERSTE Multi Asset Index 35 VC index represents eight underlying assets out of three different asset classes (shares, bonds and commodities). The underlying assets in the basic portfolio have a fixed weight and this allocation is renewed at the start of each quarter. Its target volatility of about 7% is crucial for the structure of the index.

Payment notes

How does the Prémiový dluhopis MULTI 10 work?

- The yield of the four-year PD MULTI 10 depends on the trend of global Solactive ERSTE Multi Asset Index 35 VC index.
- The initial value of the underlying asset shall be determined on 8 July 2019.
- The underlying asset is observed annually. Each year its value is recorded on the observation day.
- The average value of the underlying asset is calculated from these 4 values acquired during observation. This is then compared to its initial value.
- The total amount of the payout at maturity is calculated: 100% of the nominal value of the Premium Bond + 100% participation × (average value of 4 observations of the underlying asset/initial value – 1).
- Even with a greater fall in the underlying asset at least 100% of the Premium Bond nominal value (see Note) is always paid out at maturity thanks to the guarantee.
- For the duration of the Premium Bond its price may fall even below 100% of its nominal value with regard to the trend in the underlying asset and market conditions.
- The maximum amount of the premium is fixed at 40% of the Premium Bond nominal value for the duration of PD MULTI 10, i.e. for 4 years.
- Regular annual observation and averaging of the acquired index values partly protect the investor from any sharp fall of the prices of the observed underlying asset just before maturity. The total yield does not depend only on the closing value of the observed underlying asset, but on the continuous value of the underlying asset throughout the duration of the PD MULTI 10. However regular observation can also reduce the resulting yield (if for example there is a rise in the underlying asset just before maturity).

You will find examples of scenarios at maturity in the leaflet

Settlement

- Maturity of the Premium Bond is 24 July 2023
- Česká spořitelna pays out the yield and the nominal value
- Liquidity: daily according to current market prices in the Exchange Rate List of Česká spořitelna, a.s.
- It takes three working days to settle the buying and selling of the Premium Bond

Secondary market

- Minimum purchased amount: 1 piece
- The Premium Bond can be sold even before the maturity date for the price in the Česká spořitelna Exchange Rate List which you will find here at the Investment Centre/Exchange Rate Lists

Note: The disbursement of the guaranteed amount depends on the ability of the issuer to meet its commitments arising from the guarantee.

Underlying

Underlying

Index Solactive ERSTE Multi Asset Index 35 VC DE000SLA5QD2 Globálně zaměřený index využívající flexibilní, diverzifikovaný investiční přístup, aktivně reagující svým složením na měnící se tržní podmínky. Pro dosahování svých cílů pravidelně upravuje složení svého portfolia. Podkladová aktiva v portfoliu mají pevně nastavenou váhu (základní portfolio) a tato alokace je obnovována na počátku každého čtvrtletí. Základní portfolio indexu reprezentuje 8 pokladových aktiv ze 3 různých tříd aktiv (akcie, dluhopisy, komodity). Akciový podíl činí 35 %, dluhopisy tvoří 50 % a zbylých 15 % představují komodity (z toho 10 % připadá na zlato). Při zvýšené volatilitě se index snaží omezit riziko poklesu své hodnoty pomocí sledování volatilit. Index využívá pro sledování volatilit mechanismus „Volatility Control“, který při překročení úrovně automaticky sníží svou expozici na základní portfolio a začne více cílit na peněžní trh. V okamžiku snížení volatilit je expozice na základní portfolio odpovídajícím způsobem navyšována. Pro složení indexu je klíčová jeho cílová volatilita okolo 7 %.
