This investment product is not intended for investors who (negative target market):

- do not have adequate knowledge applying to bonds
- are not willing to accept the possible loss of the invested funds stated in the Key Information Document (KID).

- Podřízený dluhopis ČS/2034 II holder bears the issuer's credit risk.

Specific risks connected with the subordinated bond

- If the issuer gets into a situation requiring an increase in regulatory capital, it is necessary, in accordance with European legislation, to firstly use all measures for generating internal capital. The Regulatory Body can order the conversion of subordinated bonds into equity (shares), decrease of their principal or their full write-off. In this case the investor can lose the whole investment amount.

More information you will find in the leaflet.

Description

- An attractive fixed annual interest yield of 5.55% p.a. paid out annually in the first five years.
- An attractive variable annual interest yield determined every half year, the amount of which is fixed as a six-month reference interest rate of PRIBOR 6M + 1,85 % p.a., paid out semi-annually in the 6th to 10th year of duration.
- Podřízený dluhopis ČS/2034 can be repaid early by the issuer after five years of its duration. The issuer issues a subordinated bond for the purpose of meeting the regulatory capital requirements. But subordinated bonds cannot be fully incorporated into regulatory capital if the period of their final maturity is less than 5 years. Therefore their early repayment and replacement with a new issue is common market practice. However when making a decision about early repayment, the issuer will also consider the market situation, and early repayment is also subject to the approval of the Czech National Bank.
- PRIBOR (Prague InterBank Offered Rate) is an estimate of the interest rate for which the reference bank would be willing to provide a deposit to another bank on the interbank market. The administrator of the PRIBOR reference rate is Czech Financial Benchmark Facility s.r.o., which each working day calculates (fixes) the PRIBOR as the average rate from indicative quotations of reference banks. The PRIBOR is used as the price source for determining interest rates and yields of various financial products (financial derivatives, bonds including government bonds, corporate or mortgage loans, etc.)
- Issuer: Česká spořitelna, a. s.

- **Subscription period: 7. 2. až 28. 2. 2024**
- More information you will find in the leaflet.

Payment notes

This ten-year subordinated bond with the option of early repayment after five years, offers clients an annual fixed interest of 5.55 % p.a. during the course of the first five years of its duration. Then in the sixth to tenth year of duration it offers clients a variable interest yield with a semi-annual payment, the amount of which is determined as a six-month reference interest rate of PRIBOR 6M + 1.85% p.a. The bond can be repaid early by the issuer after the first five years.
