#### Performance goal and investment strategy

The performance objective of the fund is to exceed the yields on government bonds of the Czech Republic through combined investments in money market instruments and a small share of stocks. It is a mixed open share fund which is primarily intended for conservative investors with a medium-term up to long-term investment horizon. It is an optimum solution for all careful investors who would like to take part in the

development of stock markets with effective reduction of the impact of their possible fall. The fund implements such an investment strategy so that it will achieve positive appreciation within a calendar year. The share of the value of stocks, securities of foreign collective investment entities investing in stocks and investment certificates of stock open share funds is 25% of the fund asset value at the most. The portfolio management technology is drawn up in such a way that their share in assets would decrease in case the prices of stocks in the fund portfolio fall. Therefore the fund investment can continue even without the stock part till the end of the calendar year, or till the value of the investment certificate reaches the value it had at the beginning of the calendar year in which the stocks fell. The manager can also buy medium-term bonds into the fund assets, in particular with a floating interest yield.
